

ENVIRONMENTAL POLICY

These are some of the measures the hotel has implemented:

- Our air conditioning system is highly energy-efficient with complete heat recovery. We use photovoltaic energy, harnessing the waste heat from the air conditioning system to heat the pools and preheat the hot water.
- We compact cardboard as a preliminary step for recycling, and we maintain a strict waste separation policy.
 - We use LED bulbs, saving energy.
 - We have a water-saving system in showers and bathrooms.
 - We consume local and seasonal products.

With these and other actions, our hotel has achieved a "B" rating in energy efficiency, **reducing strongly its current CO2 emissions.**

Our guests can also help us with some collaborative measures:

- Sheets are changed every two days. If you would like to participate in our sustainable water-saving measures, please contact with reception and let them know, they will be changed once a week.
- Keeping our water-saving policy, we understand that towels left on the floor will require a change, and if they are hung on the towel rack, they will be used again.
- Air conditioning: Please close the windows and doors when the air conditioning is switched on, in order to avoid unnecessary energy costs.
